Kinne O
MEPS continues to grow — where is the limit? 1

RESEARCH ARTICLES

Thompson DR, Furness RW, Lewis SA
Diets and long-term changes in $\delta^{15}N$ and $\delta^{13}C$ values in northern fulmars *Fulmarus glacialis* from two northeast Atlantic colonies 3–11

Coull BC, Greenwood JG, Fielder DR, Coull BA
Subtropical Australian juvenile fish eat meiofauna: experiments with winter whiting *Sillago maculata* and observations on other species 13–19

Munk P, Larsson PO, Danielsen D, Moksness E
Larval and small juvenile cod *Gadus morhua* concentrated in the highly productive areas of a shelf break front 21–30

Syms C
Multi-scale analysis of habitat association in a guild of blennioid fishes 31–43

Breitburg DL, Palmer MA, Loher T
Larval distributions and the spatial patterns of settlement of an oyster reef fish: responses to flow and structure 45–60

Beukers JS, Jones GP, Buckley RM
Use of implant microtags for studies on populations of small reef fish 61–66

Jones MB, Epifanio CE
Settlement of brachyuran megalopae in Delaware Bay: an analysis of time series data 67–76

Thistle D, Weatherly GL, Wonnacott A, Ertman SC
Suspension by winter storms has an energetic cost for adult male benthic harpacticoid copepods at a shelf site 77–86

Brey T
Temperature and reproductive metabolism in macrobenthic populations 87–93

Navarro JM, Thompson RJ
Seasonal fluctuations in the size spectra, biochemical composition and nutritive value of the seston available to a suspension-feeding bivalve in a subarctic environment 95–106

Josefson AB, Jensen JN, Nielsen TG, Rasmussen B
Growth parameters of a benthic suspension feeder along a depth gradient across the pycnocline in the southern Kattegat, Denmark 107–115

Beukema JJ, Flach EC
Factors controlling the upper and lower limits of the intertidal distribution of two *Corophium* species in the Wadden Sea 117–126

Soto M, Kortabitarte M, Marigómez I
Bioavailable heavy metals in estuarine waters as assessed by metal/shell-weight indices in sentinel mussels *Mytilus galloprovincialis* 127–136

Tokeshi M
Polychaete abundance and dispersion patterns in mussel beds: a non-trivial 'infaunal' assemblage on a Pacific South American rocky shore 137–147

Nielsen AM, Eriksen NT, Iversen JJL, Riisgård HU
Feeding, growth and respiration in the polychaetes *Nereis diversicolor* (facultative filter-feeder) and *N. virens* (omnivorous) — a comparative study 149–158

Lindsay SM, Woodin SA
Tissue loss induces switching of feeding mode in spionid polychaetes 159–169

Soetaert K, Heip C
Nematode assemblages of deep-sea and shelf break sites in the North Atlantic and Mediterranean Sea 171–183

Black K, Moran P, Burrage D, De'ath G
Association of low-frequency currents and crown-of-thorns starfish outbreaks 185–194

Fabricius KE, Klumpp DW
Widespread mixotrophy in reef-inhabiting soft corals: the influence of depth, and colony expansion and contraction on photosynthesis 195–204

Everett RA, Ruiz GM, Carlton JT
Effect of oyster mariculture on submerged aquatic vegetation: an experimental test in a Pacific Northwest estuary 205–217

Einav R, Breckle S, Beer S
Ecophysiological adaptation strategies of some intertidal marine macroalgae of the Israeli Mediterranean coast 219–228

Beach KS, Smith CM, Michael T, Shin HW
Photosynthesis in reproductive unicells of *Ulva fasciata* and *Enteromorpha flexuosa*: implications for ecological success 229–237

Nielsen TG, Hansen B
Plankton community structure and carbon cycling on the western coast of Greenland during and after the sedimentation of a diatom bloom 239–257

Neuer S, Cowles TJ
Comparative cell-specific grazing rates in field populations of ciliates and dinoflagellates 259–267

Nakamura Y, Suzuki S, Hiromi J
Population dynamics of heterotrophic dinoflagellates during a *Gymnodinium mikimotoi* red tide in the Seto Inland Sea 269–277

Barlow RG, Mantoura RFC, Peinert RD, Miller AEJ, Fileman TW
Distribution, sedimentation and fate of pigment biomarkers following thermal stratification in the western Alboran Sea 279–291

Kruse B, Rasmussen B
Occurrence and effects of a spring oxygen minimum layer in a stratified coastal water 293–303

Ferrari GM, Mingazzini M
Synchronous fluorescence spectra of dissolved organic matter (DOM) of algal origin in marine coastal waters 305–315

MARINE ECOLOGY PROGRESS SERIES

HISTORY: Marine Ecology Progress Series (MEPS) was established in response to requests from numerous marine ecologists from all over the world. When founded, MEPS was based on 'Marine Ecology' – the first comprehensive, integrated treatise on life in oceans and coastal waters – conceived, organized and edited by Professor Otto Kinne, and published by John Wiley & Sons.

AIM: MEPS serves as a world-wide forum for all aspects of marine ecology, fundamental and applied. The journal covers: microbiology, botany, zoology, ecosystem research, biological oceanography, ecological aspects of fisheries and aquaculture, pollution, environmental protection, conservation, resource management.
Ecological research has become of paramount importance for man's future. The information presented here should, therefore, encourage critical application of ecological knowledge for the benefit of mankind and, in fact, of life on earth. Marine Ecology Progress Series has received recognition as the leader in its field. The journal strives for

- complete coverage of the field of marine ecology
- the highest possible quality of scientific contributions
- quick publication
- a high technical standard of presentation.

SCOPE: MEPS is international and interdisciplinary. It presents rigorously refereed and carefully selected research articles, reviews and notes, as well as comments, concerned with:

Environmental Factors: Tolerances and responses of marine organisms (microorganisms, autotrophic plants, and animals) to variations in abiotic and biotic components of their environment; radioecology.

Physiological Mechanisms: Synthesis and transversion of organic material (mechanisms of auto- and heterotrophy); thermo-, ion-, osmo- and volume-regulation; stress resistance; non-genetic and genetic adaptation; population genetics; orientation in space and time; migrations; behavior; molecular basis of ecological processes.

Cultivation: Maintenance and rearing of, as well as experimentation with, marine organisms under environmental and nutritional conditions which are, to a considerable degree, controlled; analysis of the physiological and ecological potential of individuals, populations and species; determination of nutritional requirements; ecological aspects of aquaculture; water-quality management; culture technology.

Dynamics: Production, transformation, and decomposition of organic matter; flow patterns of energy and matter as these pass through organisms, populations and ecosystems; biodiversity; variability of ecosystem components; trophic interrelations; population dynamics; plankton ecology; benthos ecology; estuarine and coastal ecology; wadden-sea ecology; coral reef ecology; deep-sea ecology; open-ocean ecology; polar ecology; theoretical ecology; ecological methodology; ecological modelling and computer simulation.

Ocean Management: Human-caused impacts: their role as modifiers and deformers of living systems, their biological consequences and their management and control; inventory of living resources in coastal areas, estuaries and open oceans; ecological aspects of fisheries; pollution of marine areas and organisms; protection of life in the seas; management of populations, species and ecosystems; management of coastal zones and sea areas; biotechnology.

Scientific publications appearing in this journal have been rigorously refereed, carefully quality-improved, and professionally selected by our editorial staff. These publications, and all parts thereof, are protected by copyright. This covers the exclusive rights of the publisher to *reproduce* (by any means, including photographic or electronic), to *distribute* (including via photocopies, reprints, or electronic means), and to *store* on microfilm, in electronic data bases, on video disks, etc., this material. The acceptance regulations of a manuscript for publication automatically include the consent of the author(s) to transfer the copyright to the publisher. Permission for exceptions to these rules must be obtained in writing from the publisher at the time of manuscript submission.
In the USA, photocopies may be made for personal or in-house use beyond the limitations stipulated under Section 107 or 108 of U.S. Copyright Law, provided a fee (US $3.00 per article) is paid to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA.

Publisher, editors and authors do not accept legal responsibility for errors, omissions or claims, nor do they provide any warranty, express or implied, with respect to information published in MEPS.

Tables of contents and *tables of contents with abstracts* for MEPS are available free of charge on the Internet via World Wide Web (http://www.int-res.com/int-res).
